

I can't see so good anymore. Over the last couple years, I've started wearing cheater reading glasses, even when I'm not reading or working on the computer. The 1.5 lenses allow me to see things better when I'm driving, watching t.v., or fishing. When I take them off, I can't see diddly. So, I don't like taking them off.

I've never had particularly adept skills with tying knots. Compromised vision added to a loss in dexterity makes the problem more acute every day. I certainly can't tie good knots without my cheater glasses.

All of these things have discouraged me from wearing my polarized shades while fishing on recent outings. Since I never wake up with a desire to spend several hundred dollars on prescription sunglasses, I figured I would just have to bite the bullet and fish without shades for a while. Doing so causes problems, to say the least.

Polarized shades protect the eyes from the sun's damaging rays. They also facilitate better vision "into" the water, allowing one to read the topography of the bottom better. This enhances the potential for catching more fish.

Obviously, I didn't want to continue fishing without my shades. And I think I've found an affordable solution. While at Port A Outfitters recently, I stumbled on a selection of Cocoon's sunglasses. They are designed to fit over other glasses, hypothetically the kind one gets with a prescription.

It's kinda silly, but I had no idea these types of shades were available. After a Google Search, I've learned many brands exist. I purchased some Lenswork shades in large, and intend to try them out soon. Will be glad to go back to wearing protective lenses which enhance my efforts. If you're like me and need some polarized shades to go over your regular glasses, check out the options on the internet. They aren't expensive.

And yes, I know I need to go to the eye doctor and get some prescription eyewear. I'm sure I will someday. Apparently, not this afternoon. I'm busy typing a blog!
