

I recently finished work on an HD movie project called *Spring Migration 2014*. Using about 1,000 video clips I shot in Port Aransas and on North Padre Island during the spring migration, I documented the essence of birding as I know it, and was able to capture the beauty and splendor of over 60 species of birds and other wildlife. I consider the work to be my best to date as a videographer, and am offering it burned onto a Blu-ray disc. The images transfer magnificently to an HD television screen! I believe any nature lover will find the piece both informative and entertaining. The price of \$9.99 covers cost of the disc+tax+shipping and handling. Use the PayPal button on the Products page to place an order.
